

Career Opportunities for Animal Sciences

The animal sciences curriculum provides students a core foundation to succeed in a variety of careers that require a sophisticated knowledge of animals, their management, and economies of production along with a fundamental understanding of science. Animal sciences graduates typically enter one of three career areas — Science, Production Agriculture, or Agribusiness.

Qualified graduates will also possess strong credentials for acceptance into graduate and professional degree programs. Veterinary Medicine and graduate studies in animal sciences are the two most common pursuits for further education; however, students have continued their study in business, law, human medicine, pharmacy, and dentistry as well.

Visit the Careers in Animal Sciences web page to learn about the wide variety of opportunities available!
