

Do you want to learn more about zoonotic diseases? If yes, the Department of Veterinary Preventive Medicine has a new and unique course for you.

VETPREV5721: How Animals Can Make You Sick: An Introduction to Zoonoses

offers the chance to increase your awareness of the most common diseases that can spread from animals to humans. This hybrid online course is designed to walk you through how people can be exposed to zoonoses (diseases that are transmitted from animals to humans), how they circulate in nature, and how you can avoid them. This course is open for undergraduate and graduate students from all majors and fields.
